AMAN MEHTA

Fresher | Full-Stack Developer | Final-Year B.Tech, Electrical & Electronics Engineering
Raipur, Chhattisgarh | +91-9770240528 | amankrmehta02@gmail.com | github.com/amanmehta276 | linkedin.com/in/aman-mehta

OBJECTIVE

Final-year EEE student targeting a Software Engineer role. Built and shipped 10+ web, mobile, AI and hardware projects, including a delivered client website. Solid in DSA (200+ problems solved), REST API design and full-stack development with React, Node.js, FastAPI and Python.

EDUCATION

B.Tech, Electrical & Electronics Engg. - CGIT, Raipur | 2023 - 2027

12th (PCM): 87.4% | 10th: 95.3% - Sarswati Shishu Vidya Mandir, Raipur

PROJECTS

VyomsTech PCB Designer - Browser-Based PCB Design Tool | tscircuit, JavaScript, Web Audio API

- Built a browser-based PCB design tool with live PCB, schematic and 3D preview, SPICE-based circuit simulation and one-click Gerber export for manufacturing.
- Added an original Audio Filter Testing feature: record or upload audio, pass it through a user-designed RC filter using a live Web Audio BiquadFilterNode (cutoff computed from the circuit's R/C values), and compare input vs. output as waveforms and downloadable audio.

GateHub - Academic Resource Platform (Web + Mobile App) | Node.js, REST API, MongoDB, Supabase, JWT

- Built a backend and REST API for students to upload, manage and access subject-wise study material, shipped as both a web platform and a mobile app with JWT authentication and Supabase cloud storage.
- Designed a subject/semester file-organization schema for browsing and search without manual tagging; handled large uploads with progress feedback on web and mobile.

TrackMind - AI-Powered Study Analysis Platform | Python, AI/ML, Image Recognition

- Built a platform that evaluates notes, identifies knowledge gaps and gives personalized feedback, with study performance tracking.
- Built a note-ingestion pipeline that accepts photographed/handwritten notes, extracts text and flags weakly covered topics to revisit before exams.

Waste-Heat Water Distillation for AI Data Centers - Hardware Prototype | ESP32, Embedded C/C++, Relay, Sensors

- Built a working prototype that reuses data-center waste heat to distill dirty or salty water; ESP32 switches the heater via relay and monitors a waterproof temperature sensor with automatic overheat cutoff. Published a write-up.
- Designed a sealed evaporation chamber with an angled condensing lid and a finned lid to pre-warm feed water; fixed leaks and weak condensation using silicone gaskets, lid angle and insulation.

CLIENT & INDEPENDENT PROJECTS - VYOMSTECH

Ghosh Global Services - Client Website 2025

- Delivered and manage the client's website end-to-end: development, hosting, SEO and email infrastructure.
- Built a PDF rebranding automation tool using Python and PyMuPDF.

CSPDCL Substation Management Website (Nawapara Rajim 33/11 kV) 2025

- Built a fully responsive frontend with image fallback handling and a pinch-zoom single-line diagram (SLD) viewer.

Sangam - Alumni Association Platform, CGIT 2025

- Built a full alumni platform with profile management, inline editing and college branding.

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript
Web & Backend: HTML, CSS, React.js, Node.js, Express.js, FastAPI, REST APIs, Responsive Design
Databases: MongoDB, SQL, Supabase
CS Fundamentals: Data Structures & Algorithms, Operating Systems, OOPs, Computer Networks
Tools: Git/GitHub, VS Code, Chrome DevTools

CERTIFICATIONS & ACHIEVEMENTS

- GeeksforGeeks - 160 Days of DSA with Python (Aug 2025) | PhysicsWallah - Decode DSA with Python (Aug 2025)
- Cisco Networking Academy - Data Science Essentials (Dec 2025) | PhysicsWallah - Cloud Computing
- Vocational Training - CSPDCL, Electrical Engineering & Power Systems (Jul 2025)
- Solved 200+ DSA problems on GeeksforGeeks and LeetCode; built and shipped 10+ personal and client projects.
